

PLEXIGLAS ALLTOP®:

A Clear View Whatever the Weather

It's raining. Raindrops roll off leaves and blossoms, off the smooth plumage of birds, and the thick fur of wild animals. Each creature has its own way of protecting itself against the rain. A second skin. I have my conservatory.

Light Brightens Up the Darkest Day.

Your car has windshield wipers for when it rains – your conservatory has the Alltop coating. Both ensure a clear view. Because of this coating and the extra-wide web spacing, 91 % of daylight enters your „leafy“ lounge even when the weather is dull. So your mood stays bright on cloudy days too. Light is uplifting.

PLEXIGLAS ALLTOP® double-skin sheets are available in

- 16 mm thickness
- widths of 980¹⁾ and 1200 mm
- lengths up to 7000 mm
- clear-transparent

The sheets have a perfectly smooth surface and are highly light-transmitting.

This is due to the Alltop coating, which ensures that ordinary dirt is washed off by the rain.

The whole range:

- PLEXIGLAS RESIST® multi-skin sheets
- PLEXIGLAS HEATSTOP® multi-skin sheets
- PLEXIGLAS RESIST® corrugated sheets
- PLEXIGLAS HEATSTOP® corrugated sheets
- PLEXIGLAS® textured sheets

The multi-skin and corrugated sheets are suitable for a variety of applications: conservatories, patios, domestic greenhouses, carports, wind screens and balcony balustrades.

¹⁾ Installation of the sheets without crosswise supports applies to a width of 980 mm and snow load zone 1

A Healthy Tan Is Part of the Deal.

PLEXIGLAS ALLTOP® multi-skin sheets transmit the entire spectrum of UV light. That gives you a healthy tan and makes your plants thrive in a profusion of glorious colors.

PLEXIGLAS ALLTOP® multi-skin sheets: the ideal choice for conservatories, domestic greenhouses and patio roofs.

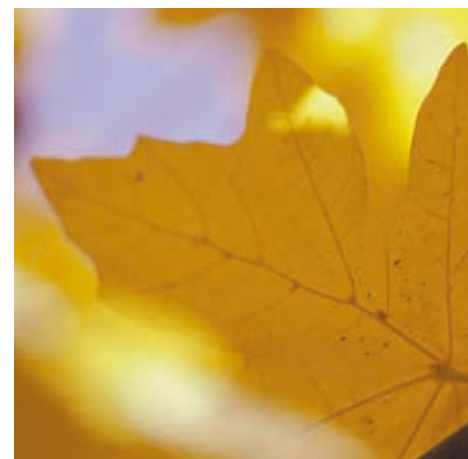

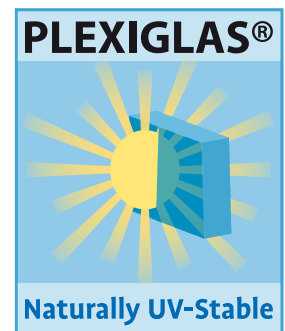

Easy to Handle.

PLEXIGLAS ALLTOP® sheets are available in lengths up to 7 meters and can be installed without crosswise supports¹⁾. Moreover, they only weigh about 5 kilograms per square meter. That saves effort during installation and enables you to choose supporting structures that are light and airy, but stable all the same.

Natural protection against yellowing and loss of light transmission.

As well as providing us with light and warmth, the sun also emits UV radiation. An increasing proportion of harmful UV radiation is reaching the earth due to the hole in the ozone layer.

PLEXIGLAS® is made up of extremely strong, UV-stable molecules throughout the material. The special NATURALLY UV-STABLE technology stabilizes PLEXIGLAS® from the inside out and protects the entire sheet, not just its surface. That means maximum protection against UV radiation, yellowing and loss of light transmission.
